

Place, Perception, and Narrative in Film Data

Spatial and Textual Analysis of Violence and Poverty Themes

MSc Data Science | Spatial + Text Analysis. Middlesex University 2026

Group members:
Noura Lakrimdi; Assia Ibrahim Kale;
Walid Dachraoui; Yash Galande

? Research Question:

Are violence-related and poverty-related themes more prevalent in films produced in the Southern Hemisphere compared to the Northern Hemisphere (1990–2024)?

Method

Transformer embeddings
Semantic similarity
Spatial aggregation

Data

Source: IMDb film summaries
Features: -Text (summaries)
- Country of origin
-Hemisphere classification

index	Label Name	What it Represents
0	violence_flag	Binary indicator (1 or 0) for the presence of violence-related themes in a film's synopsis.
1	poverty_flag	Binary indicator (1 or 0) for the presence of poverty-related themes in a film's synopsis.
How it was Created		
Initially derived by checking for keywords. Later refined using Sentence Transformer cosine similarity scores (violence_score) and a threshold of 0.30.		
Initially derived by checking for keywords. Later refined using Sentence Transformer cosine similarity scores (poverty_score) and a threshold of 0.30.		

Limitation

Data imbalance
- No ground truth
- Threshold sensitivity

No clear geographic clustering.

Small differences between hemispheres

Themes co-occur (positive relationship)

Themes show variation across countries. No clear geographic clustering is observed.

Narrative themes are not geographically determined

NLP improves theme detection, but geographic patterns remain weak.

- Themes are continuous, interconnected, and not spatially structured.

Violence-related and poverty-related themes tend to co-occur within film narratives.

Films with higher violence scores are more likely to also exhibit higher poverty-related signals.
